THE ONE-PLAN ORDER

Three prices go in together or none of them go in. Then R does the accounting, and the stop distance picks the lot size.

THREE ORDER TYPES

Your platform offers more than this. You need three, and two of them do almost all the work.

MARKET ORDER

Filled now, at whatever price is showing. Honest and fast, and the one most likely to fill you worse than you planned when the spread is wide. Use it only when you are at the screen and the level is close.

PENDING ORDER — YOUR DEFAULT

Waits at a price you chose while calm, with the stop loss and target attached. It removes the decision from the moment of entry, which is exactly where decisions go wrong.

STOP ORDER

Triggers once price trades through a level, used to join a break rather than fade it. Also the mechanism behind your stop loss, which is the only order you must never place late.

ONE PLAN, THREE PRICES

Entry, stop loss and take profit are one decision, not three. If you cannot state all three before the order goes in, you do not have a trade — you have a position and a hope.

FIGURE 1

Schematic. The distance from entry to stop loss is 1R. Every target is measured in that unit and nothing else.

R — THE ONLY UNIT

One R is the distance from your entry to your stop loss. A trade that pays twice that is +2R whether the stop was 40 pips or 150. Counting in R makes two trades comparable and makes your account size irrelevant to the conversation, which is why every result in this brand is published in pips and R.

- Risk-reward is target distance divided by stop distance. Under 1:1.5 to TP2, there is no trade.
- A 40% win rate at 1:2 makes money. A 70% win rate at 1:0.5 does not. Win rate alone tells you nothing.
- Count the spread into the R before you decide the trade clears the minimum.

POSITION SIZING, IN ONE LINE

Risk 1% of the account, divide by the stop distance in pips, and the lot size falls out. Do this before you look at the entry price, so confidence never gets a vote.

WORKED THREE WAYS — SAME 1% RISK

40 pips	stop distance	largest lot
80 pips	stop distance	half of that
150 pips	stop distance	smallest lot

All three lose exactly 1% if they stop out. That is the point of sizing: the loss is a constant and the market decides everything else.

TWO THINGS NEVER TO DO

- Shrink the stop loss so a bigger lot fits. You have not reduced risk, you have raised the chance of being stopped by noise.
- Widen the stop loss after entry. The stop was the plan; moving it means there is no plan.

TWO WAYS IN

Same ranks, two routes. Pick one.

ROUTE A — OPEN AN ACCOUNT UNDER OUR LINK

Malaysia · Singapore · Brunei

hfm-malaysia.com

Indonesia — open a VPN first

hfm-trade-ind.com

Anywhere else — ask Sam
