

MINDSET BRIEFING

13 TRADER MINDSET TECHNIQUES

Trading is 90% mindset. Thirteen techniques, grouped into four themes: plan, mind, risk, execution.

Not written to be read once — written to be checked every day before the market opens.

WHAT IS INSIDE

01	Introduction — the four themes	03
02	Theme 1 · Plan · Technique 1	04
03	Risk, size, exits · Technique 11	05
04	Theme 2 · Mind · Techniques 2 and 3	06
05	Theme 2 · Mind · Techniques 5 and 12	07
06	Theme 3 · Risk · Techniques 6 and 7	08
07	Theme 3 · Risk · Techniques 9 and 13	09
08	Theme 4 · Execution · Techniques 4, 8 and 10	10
09	The daily practice	11
10	Summary and next steps	12

HOW TO USE THIS MANUAL

Read it once, end to end. After that, page 11 is the only page you need daily — print it and keep it next to the screen. Come back to the theme pages on the days you break something.

FOUR THEMES, THIRTEEN TECHNIQUES

Whether you are starting out or have been at this for years, there is one set of techniques you have to hold on to. You have heard the line before: trading is 90% mindset. It is true. You are not only up against the market — you are up against yourself.

A factory cannot build a car until its machines are programmed. A trader's mind is the same. These thirteen techniques are that program, grouped into four themes so the whole thing can be reviewed in a minute.

PLAN

Technique 1 · 11

Write it first, enter second.

MIND

2 · 3 · 5 · 12

Emotion managed, not obeyed.

RISK

6 · 7 · 9 · 13

Lose small, win big.

EXECUTION

4 · 8 · 10

Act when the plan says so.

THE ORDER IS FIXED

NOT ONE OF THEM CAN BE SKIPPED

FIGURE 1 · THE MAP OF THIS MANUAL. THIRTEEN TECHNIQUES, FOUR THEMES, ONE MINUTE OF REVIEW BEFORE THE OPEN.

ONE WARNING

None of this is theory, and none of it is complicated. It is easy to understand and hard to obey — which is exactly why most traders know all of it and still lose. Reading takes twenty minutes. Obeying takes a career.

HAVE A PLAN BEFORE YOU ENTER – THEN OBEY IT

Your trading plan is your plan of action in the market. Write it down. Not in your head — on paper, so it can be reviewed and cannot quietly change with your mood. The seven questions below are the plan. If one of them has no answer, the plan is not finished.

-
- 01 Who are you as a trader? Scalper, day trader, swing, or position. Pick one and write it. An identity that changes every week is not an identity.
-
- 02 Which market do you trade? One instrument you know beats ten you are trying. We trade XAUUSD only, and that is wide enough.
-
- 03 Which strategy do you use? Keep it short. If your entry rules do not fit on an index card, they are too complicated. Test before real money.
-
- 04 How much do you risk per setup? One fixed percentage of capital, the same every time. See the next page.
-
- 05 How do you exit? Two answers required: when you are wrong, and when you are right. Both are set before you enter.
-
- 06 When do you not trade? News windows like CPI, NFP and FOMC. Weeks you are busy. Days you did not sleep. Write that list in advance.
-
- 07 How do you record each trade? One simple sheet. The fields are on page 11.
-

REVIEW QUESTION · THEME 1

Can you read your whole plan out loud in under a minute? If not, it is a document you will ignore the moment price starts moving.

RISK, SIZE, EXITS

Set one number: the percentage of capital you risk per setup. We use 1% maximum. That number does not rise because you feel confident, and it does not rise because you just lost. Lot size is calculated from it — never the other way round.

RISK STAYS AT 1% OF CAPITAL — ONLY THE LOT CHANGES

Wide stop

→ small lot

Tight stop

→ larger lot

$$\text{LOT SIZE} = (1\% \text{ OF CAPITAL}) \div (\text{STOP DISTANCE})$$

FIGURE 2 · THE RISK RATE STAYS IDENTICAL ON EVERY SETUP.

EXIT WHEN YOU ARE WRONG

A stop loss is used every time, with no exceptions. Decide the method in advance, and never move the stop away from price. That is the one way an account disappears in a single trade.

EXIT WHEN YOU ARE RIGHT

Fixed target or trailing stop — pick one before you enter. Decisions made while the position is open are made by emotion, not by you.

TECHNIQUE 11 *PREPARE, AND KEEP LEARNING*

Do not walk into the market on impulse. Do not imagine you can turn up five minutes before the session and know what to do. Homework happens before the open, not while a position is running. It buys you two things: you are calmer, and when an opportunity arrives you are only executing.

Review your closed trades. Test new ideas away from the live account. The target is the same as it is in life: better today than yesterday.

CONTROL EMOTION. EVERY SINGLE TIME.

Psychology is the largest part of this job. It is what separates the trader who lasts years from the trader who blows up an account every few months.

Trade without fear, greed, panic, laziness or ego. Leave your pride outside the door.

THE MOST EXPENSIVE HABITS

- Revenge trading after a loss
- Raising the lot to “win back” a loss
- Overconfidence after three wins
- Digging in when the market has already answered

WHAT TO TRAIN INSTEAD

- ✓ Executing the plan without arguing with it
- ✓ Recognising an emotion before it acts
- ✓ Stopping for the day when your head is not clear
- ✓ Accepting that the market owes you nothing

TECHNIQUE 3 *STAY DISCIPLINED, THINK OBJECTIVELY*

Every long-term success comes from a consistent approach. Obey the plan. Obey your stop loss and your target. Do not look for shortcuts — the market will find them before you do.

Thinking objectively means you do not arrive with the answer already decided. You are not after certainty; you are after a good opportunity. Read what price is doing, not what you want it to do. Then act.

REVIEW QUESTION · THEME 2

Your last trade — was it opened because the plan called for it, or because you wanted to be doing something?

DO NOT THINK ABOUT MONEY WHILE TRADING

If your focus is on making money, emotion arrives and your decisions get worse. Of course money is the eventual goal — but it is not what you are thinking about while a position is open. Focus on executing correctly. Profit is a by-product of trading well.

THE RIGHT SEQUENCE

Focus: process → calm execution → profit

THE WRONG SEQUENCE

Focus: money → emotion arrives → lot raised → stop moved → account gone

FIGURE 3 · TWO SEQUENCES. YOU PICK WHICH ONE BEFORE THE MARKET OPENS.

TECHNIQUE 12 ***REMEMBER WHY YOU TRADE***

Trading is not a game, and it is not the end goal either. There has to be a bigger reason behind it — that reason is what stays your hand on a hard day. Think about it before the session starts, not after the account turns red.

Just as profit is a by-product of correct execution, trading is a by-product of something larger. Write your reason on the first page of the journal, and read it every morning.

REVIEW QUESTION

If you could not look at your account balance for thirty days, would the way you trade change?

WIN RATE MEANS NOTHING ON ITS OWN

What matters is not how often you are right, but the size of the wins against the size of the losses. Even the best traders are right about half the time. You can be right only 40% of the time and still make money — if the ratio is right.

10 TRADES · 40% WIN RATE · 1:3 RATIO

4 wins	+12R
6 losses	-6R
Net	+6R

— with more losing trades than winning ones.

FIGURE 4 · A WORKED CALCULATION, NOT A PERFORMANCE RECORD.

TECHNIQUE 7 *LOSE LIKE A PROFESSIONAL*

Professionals lose often — sometimes more often than they win. The difference is that they lose the right way.

- ✓ Cut the loss early and keep it small
- ✓ Admit you are wrong quickly
- ✓ Forget it the moment it closes
- ✓ A stop loss on every position
- ✓ Accept the loss and move on
- ✓ Treat losses as a cost of the business

A loss taken according to plan is not a mistake — it is evidence that you executed. The capital it frees can go into the next setup. Lose small, win big.

CASH IS A POSITION TOO

You do not need to be in the market at all times. You can be long, short, or in cash. If there is no clear opportunity, cash is the correct answer — not the lazy one. When conditions are too violent, or you simply cannot see anything clearly, stand aside.

Your first job is protecting capital. Capital built over years can be destroyed in minutes if it is not looked after. Put it to work only when the moment is right.

TECHNIQUE 13 *FOCUS ON WHAT YOU CONTROL*

Three things are inside your control. The rest belongs to the market, and your opinion about it is worth nothing.

CONTROLLABLE 01

RISK

The percentage per setup, and how many positions are open at once.

CONTROLLABLE 02

EMOTION

The decision to stop, and the decision not to enter at all.

CONTROLLABLE 03

EXECUTION

Following the plan, every time, without changing the terms mid-trade.

OUTSIDE YOUR CONTROL

The direction of price. Central bank decisions. The release that lands at eight in the evening. How long a trend lasts. Spending energy on any of it is the source of most mistakes — the market is always open, and there is always a next setup.

REVIEW QUESTION · THEME 3

Your biggest loss last month — was it the market, or was it the lot size?

DO NOT TRADE JUST TO BE TRADING

Enter only when there is a clear reason. Not because you want a position on. Not because price has fallen a long way, or risen a long way. Not because you feel the market should move — the market never should anything. Doing nothing is often the best action, and usually the hardest.

TECHNIQUE 8 ***LET THE WINNERS RUN***

Long-term profit needs large wins. When a position moves your way, do not rush to close it. A trailing stop is the calmest way to do this — it lets the position run without you making a decision every hour.

FIGURE 5 · SCHEMATIC. THE STOP IS RAISED, NEVER LOWERED.

TECHNIQUE 10 ***FOLLOW THE PATH OF LEAST RESISTANCE***

Do not fight a trend that is already running. Calling tops and bottoms is a game with no winners. You do not need to enter at the lowest price and exit on the highest tick — you only need the middle of the move.

REVIEW QUESTION · THEME 4

How many of last week's trades were genuinely called by your plan?

THE DAILY PRACTICE

Thirteen techniques are worthless if they stay as reading. This is their daily form.

Print this page and keep it beside the screen.

BEFORE THE OPEN

- ✓ Read your reason for trading
- ✓ Check the news calendar
- ✓ Mark the levels on the chart
- ✓ Set risk: 1% maximum
- ✓ Decide when you will not enter

DURING THE SESSION

- ✓ Enter only when the plan says so
- ✓ Stop and target attached together
- ✓ Stop never moved away from price
- ✓ No revenge trades
- ✓ Stop when your head is not clear

AFTER THE SESSION

- ✓ Record every trade
- ✓ Mark which technique you broke
- ✓ Close the terminal
- ✓ Review the journal each month end

HOW WE WORK

Every SamBangGold setup is sent with an entry price, a stop loss and three targets, plus a 1% maximum risk instruction. News windows are closed. Losses are published the same day, in the same card, at the same size as the wins. All of it in pips and R.

FOUR THINGS, EVERY DAY

All thirteen techniques interlock, and all of them come back to the same four things.

PLAN

Written before you enter, reviewed monthly, never changed while a position is open.

MIND

Emotion recognised and managed. Focus on the process, not on the balance.

RISK

Lose small, win big. Win rate on its own means nothing. Cash is a position too.

EXECUTION

Enter when the plan says so. Let winners run. Do not fight the trend.

Protecting capital matters as much as making profit. Stop once a week and ask whether you are still obeying all four. The trader who knows every technique but obeys none of them ends up in the same place as the one who never read them.
